

ttdsoft – WA Premium and WAM Pro

Step 7 - Copy encrypted files in encrypted USB Drive.

7-1. In **step -1**, we already created a folder called “Players for All “and copied all players [for Windows, Android and Mac] in it.

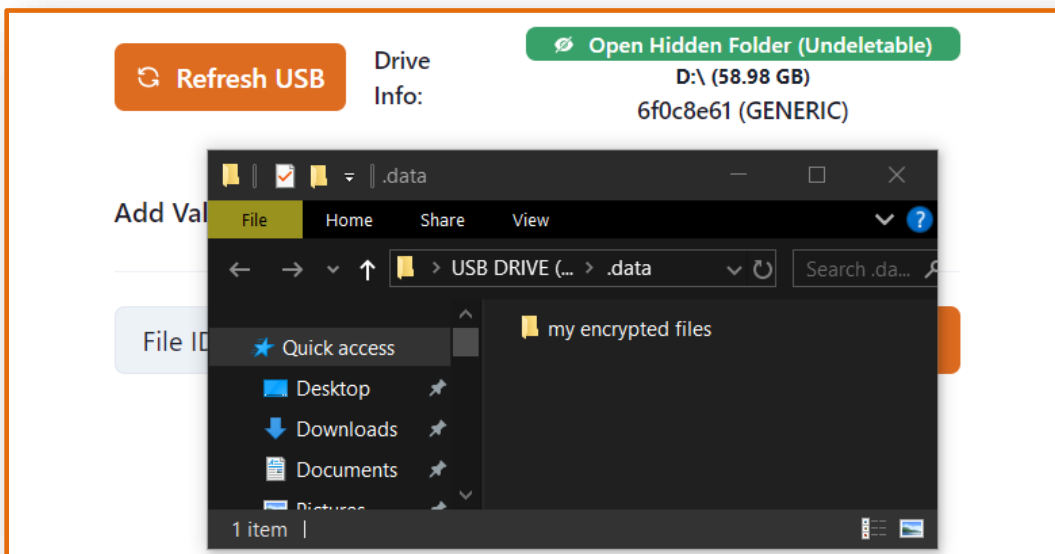

In **Step - 5 and 6**, we created a folder called “my encrypted files “and copied all encrypted Video, Audio and PDF files.

7-2. Put your encrypted USB Drive and click on the “**Refresh USB**”.

Now, click no – “**Open Hidden folder [Undeletable]**”

A new folder **.data** will be created in this USB Drive, which will be hidden for user Put your “my encrypted files” folder here [copy and paste].

7-3. Now, Copy "Players for all" on the root of USB drive so that user can access and install these players in there devices.

Now the USB Drive is ready to check and send to the user without any limitation.
